AUBURN ACADEMY

Office of Communications
Administration Building, Level 2
Auburn, AB5 ADM

For immediate release

10 November 2026

AUBURN, AB5 0AA Auburn Academy will establish the Department of Computer Science, effective 1 January 2027, following a vote by the Board of Trustees to accept a recommendation from the Dean of the Preparatory School and the Academy President. The existing Programme in Computer Science will separate from the Department of Engineering & Applied Science to form the new department. This will mark the first new department since the Academy's founding.

The new Department of Computer Science reflects the increasing role that computer science and related fields and technologies play in the Academy's curriculum and in the broader world. Among the department's charges will be essential computer literacy education, fundamental computer science instruction, academic offerings in software development and cybersecurity, and community outreach initiatives relating to computing. As the Academy is committed to tightly limiting generative artificial intelligence in its curriculum and operations to exceedingly rare use cases, offerings related to A.I. beyond instruction in responsible A.I. use will not be among the department's programmes.

The Department of Computer Science will remain in the Engineering Centre alongside the Department of Engineering & Applied Science while plans for a replacement building are progressed. The new building, to be known as the Engineering & Computer Science Centre (ECS), will be constructed on the site of the existing Engineering Centre and its Fishbowl addition. ECS will feature enlarged and modern facilities for both departments, including laboratory classrooms, computing classrooms, a makerspace, and high-performance computing resources. During construction, Computer Science and Engineering & Applied Science will be housed in spaces in the recently reconstructed Science Centre and Laboratory Sciences Centre.
